Utilitarianism and the original position

Choices				Possible outcome 2 (probability × value = expected value)			Expected utility (sum of expected values)			
One	.75 × 100 =	75	.25	.25 × 160 = 40			115			
Two	.33 × 99 =	33	.66	.66 × 150 = 100			133			
	Table 1 Illustration of maximizing expected utility									
Principles	А	В	С	D	E	Tota	al	Average		
Set One	10	45	40	70	50	215		215/5 = 43		
Set Two	60	25	30	20	65	200		200/5 = 40		
Table 2 Average utility										
Principles	A	В		С	D		E		Sum	
Set One	10/5 = 2 45/5 =		= 9	40/5 = 8	70/5 = 14		50/5 = 10		43	
Set Two	60/5 = 1	2 25/5	= 5	30/5 = 6	20/5 =	4	65/	5 = 13	40	
Table 3 Expected utility assuming equal probabilities										

1 Why the parties might choose average utilitarianism

Political Philosophy

2 What probabilities do they not know?

The probability of being any particular person?

"The first difficulty with the average principle I have already mentioned in discussing the maximin rule as a heuristic device for arranging the arguments favoring the two principles. It concerns the way that a rational individual is to estimate probabilities. This question arises because there seem to be no objective grounds in the initial situation for assuming that one has an equal chance of turning out to be anybody."

The probability of being in any particular circumstances?

"Since the maximin rule takes no account of probabilities, that is, of how likely it is that the circumstances obtain for their respective worst outcomes to be realized, the first condition [under which it makes sense to use the maximin rule] is that the parties have no reliable basis for estimating the probabilities of the possible social circumstances that affect the fundamental interests of the persons they represent."²
